

MEDICAL WASTE & COMPLIANCE TRAINING

A Helpful Infographic

Bloodborne Pathogens (BBP)

Disposing of contaminated waste in the wrong trash receptacle can lead to a wide spread of infection. All employees with risk of exposure to medical waste that may contain BBPs are required to take this course. They will learn about proper management of sharps, how to develop a comprehensive exposure control plan, disposal of RMW and more.

D.O.T. Hazardous Materials Transportation Regulations (HM-181)

Your responsibility for your medical waste does not stop once it leaves your building. You must make sure that the medical waste service providers you work with are properly insured, permitted, and licensed. This DOT course will provide coverage of the necessary rules that apply to transporters to decrease your medical facility's risk.

Waste Handling and Classification Regulations

State and federal guidelines must always be strictly followed to maintain compliance. But this can be easier said than done as regulations can change frequently and quickly. Your facility's compliance point person or anyone with exposure to RMW should take this course to learn proper medical waste plan preparation, packaging, and labeling.

Health Insurance Portability and Accountability Act (HIPAA)

HIPAA can be confusing, so it is important that anyone on your staff that comes into contact with protected health information take this course, where they will learn how to design, implement, and administer a compliance program.

Personal Protective Equipment (PPE)

Wearing the proper personal protective equipment helps employees minimize exposure to hazardous waste that may cause serious illness or injury. This training, which is required by OSHA, covers the various types of PPE and how they are meant to be used to prevent exposure. This course should be taken by anyone with exposure to potentially infectious diseases, as well as any healthcare worker within your organization that comes in direct contact with patients.

Pharmaceutical Waste

To meet state and federal regulations, your facility or practice's pharmaceutical waste must be disposed of properly. This course, which covers the RCRA, classification of pharmaceuticals and more, should be taken by any pharmacy personnel or anyone signing a hazardous waste manifest.
